PCB Assembly Tooling Customer Testimonials

Our design & engineering teams have over 25 years design experience within the electronic assembly sector. Utilising your PCB digital data we can produce a range of quality bespoke assembly tooling to cover your process requirements.

All PCB Tooling is manufactured from a range of high performance composite materials, to suit individual process requirements and designs are optimized to ensure fixings, clamps & top hats operate efficiently.

Please see below feedback from some of our existing customers.

'Design service is excellent, with very good communication from initial enquiry right through the process... Pricing is very competitive and the quality of tooling received always meets our expectations.'

'Solder Connection are fully conversant with the needs of the industrial electronics assembler... We can now acquire perfect tooling by producing a concept drawing with Gerbers or DXFs... Drawings are completed in hours... Finished fixtures are only ever a few days away'

'From the beginning we have had a very positive experience... Competitive with their pricing... excellent customer service and an equally impressive delivery record.'

'Excellent understanding of our process, a prompt quotation and proposed tooling drawing for review within hours... the speedy turn round time enables us to meet our already small cycle time.'

'The provided designs have been brilliant and efficient...jigs finished to high standard and accuracy. Attention to detail...second to none and I would recommend...to anyone needing excellent quality production tooling.'
